# CHHATTISGARH

## FORMAL SURVEY REPORT

Geography • Environment • Lifestyle
Technology • Development

*Ancient name: Dakshin Kosala*

Team Leader:
Neelam Patel

Team Name:
Brainy Bunch

Class / Section:
CSE, Section A2

Subject:
Rural Immersion and Innovation

Submitted to:
Mrs Tanvi Nandi Ma'am

ACADEMIC PROJECT

# INDEX / CONTENTS

## Survey topics

01 Introduction and Place Profile

02 Geographical Details and Population

03 Environmental Details

04 Habitat and Lifestyle

05 Technology and Science

06 Amenities Available

07 Challenges

08 Suggestions / Modifications

09 Government Facilities and Schemes

10 Conclusion and Remarks

# INTRODUCTION AND PLACE PROFILE

- **Chhattisgarh is a state in central India, formed on 1 November 2000 after separation from Madhya Pradesh.**

- The capital is Raipur; the state is known for forests, mineral resources, agriculture, tribal culture, and industry.

- The ancient region associated with present-day Chhattisgarh is commonly known as Dakshin Kosala.

- The state combines rural and urban communities, traditional livelihoods, and modern infrastructure development.

# GEOGRAPHICAL DETAILS AND POPULATION

- Located in central India; it shares boundaries with Madhya Pradesh, Maharashtra, Telangana, Odisha, Jharkhand, and Uttar Pradesh.
- Terrain includes plains, plateaus, forested hills, river valleys, and mineral-rich regions.
- The Mahanadi and its tributaries are important to the state's geography and agriculture.
- The 2011 Census recorded a population of approximately 2.55 crore; newer estimates may differ.

# ENVIRONMENTAL DETAILS

- Chhattisgarh has extensive forests, diverse wildlife, rivers, waterfalls, and mineral deposits.
- Forests support biodiversity and many rural and tribal livelihoods.
- Concerns include forest degradation, mining and industrial pollution, water pressure, and waste management.
- **Useful measures:** native-species afforestation, water conservation, cleaner industry, renewable energy, responsible mining, and recycling.

# HABITAT AND LIFESTYLE

- **People live in villages, small towns, and growing urban centres such as Raipur, Bilaspur, Durg-Bhilai, and Korba.**
- Rural livelihoods include farming, forest-produce collection, animal husbandry, crafts, and local trade.
- Culture is expressed through folk music and dance, festivals, traditional crafts, cuisine, and regional languages.
- Access to education, healthcare, transport, and commerce varies; remote forested areas may face longer travel distances.

# TECHNOLOGY AND SCIENCE

Technology supports mining, steel production, power generation, agriculture, transport, public services, and urban management.

Digital services and mobile connectivity can improve access to information and government services.

Potential improvements include sensor-based mine safety and predictive maintenance in factories.

**Solar-powered cold storage, digital marketplaces, offline-first healthcare tools, and regional-language STEM platforms can help.**

Innovation should be affordable, accessible to rural users, locally suitable, and supported by training and maintenance.

# AMENITIES AVAILABLE

## Education:

schools, colleges, technical institutes, universities, and skill-development centres operate across the state.

## Healthcare:

government hospitals, community health centres, primary health centres, and frontline health workers provide services.

## Transport and utilities:

roads, railways, electricity, mobile networks, and water-supply systems support communities and industry.

## Urban services:

major cities provide markets, public facilities, waste-management services, and selected digital and smart-city systems.

Access and quality can vary by region, with specialist healthcare and utilities harder to reach in some remote areas.

# CHALLENGES

- **Uneven access to healthcare and education, rural connectivity gaps, post-harvest losses, and limited cold-chain storage.**
- Market-access barriers for local producers and artisans.
- Mining and industrial activity can cause air and water pollution, land disturbance, and worker-safety risks.
- Infrastructure projects must consider forests, wildlife, and local communities.
- Ensure investment, technology, and skill-development benefits reach small businesses, rural residents, and tribal communities fairly.

# SUGGESTIONS / MODIFICATIONS

1. Set up affordable solar-powered cold rooms and shared processing units near farming and forest-produce clusters.
2. Improve mine and factory safety with sensors, worker alerts, preventive maintenance, and regular training.
3. Expand telemedicine, offline-capable health tools, and reliable emergency transport for remote settlements.
4. Support tribal artisans through fair-price digital marketplaces, product photography, packaging, and direct buyer links.
5. Provide portable science kits, maker spaces, regional-language learning resources, and industry mentorship.
6. Encourage cleaner production, wastewater treatment, recycling, renewable energy, and restoration of mined land.
7. Consult local residents and monitor accessibility, environmental effects, and fair distribution of benefits.

# GOVERNMENT FACILITIES AND SCHEMES

- **Residents may qualify for programmes related to food security, rural employment, housing, health coverage, farmer support, scholarships, skills, and tribal welfare.**
- Examples include **MGNREGA**, **PMAY** (housing), **Ayushman Bharat / PM-JAY** (eligible health coverage), and **PM-KISAN** (eligible farmers).
- Scholarship schemes may support eligible students.
- Availability and eligibility rules vary; confirm current details with official state portals, relevant departments, or local government service centres.

# CONCLUSION

- **Chhattisgarh has strengths in agriculture, forests, minerals, energy, industry, and cultural heritage.**
- **These resources create opportunities for inclusive economic and social development.**
- Future progress can be strengthened through practical innovation, better public amenities, environmental protection, quality education, and healthcare access.
- Fair opportunities for rural and tribal communities are essential for balanced development.

# REMARKS / FIELD OBSERVATIONS

## Final review

- This report presents a general survey of Chhattisgarh using the topics specified for the academic assignment.
- Before submission, add current local photographs and confirm the latest statistics and scheme details from official sources.
- Include any field-survey observations required by the teacher.
